Summary

Motivated Computer Science undergraduate specializing in Artificial Intelligence with strong foundations in Data Structures, Algorithms, and Software Development. Experienced in designing scalable backend systems and intelligent applications using Node.js, React.js, PostgreSQL, and Machine Learning models. Passionate about building performance-driven, data-centric solutions and applying AI techniques to solve real-world engineering challenges.

Education

CVR College of Engineering <i>B.Tech in Computer Science & Engineering (AI Specialization) – CGPA: 8.34</i>	Hyderabad, India <i>Sep 2023 – Apr 2027</i>
Acharya Junior College <i>Intermediate (MPC) – Score: 87.7%</i>	Kurnool, India <i>Jun 2021 – Apr 2023</i>

Technical Skills

Languages: Java, Python
Databases: PostgreSQL, MySQL
Frameworks & Tools: Node.js, React.js, Fast API
Developer Tools: Git, Postman, Visual Studio Code
Core CS: Data Structures, Algorithms, Object-Oriented Programming

Internship

Alteryx Data Analytics Process Automation <i>AICTE – Eduskills Remote</i>	Oct 2025 – Dec 2025
- Worked on data analytics workflows using Alteryx for automation and process optimization. - Performed feature engineering, predictive modeling, and visualization tasks.	

Projects

IoT Integrated Soil and Plant Health Monitoring System Python, Machine Learning, Random Forest, SVM, IoT	
- Developed an IoT-based monitoring system to collect and process real-time soil and environmental sensor data for agricultural analysis. - Built a Python-based data processing pipeline with preprocessing, feature engineering, and machine learning models for plant health and soil fertility prediction. - Optimized model performance through feature selection and hyperparameter tuning, improving prediction accuracy and system reliability. - Designed a modular architecture for sensor data ingestion, model inference, and performance evaluation using accuracy, precision, recall, and F1-score.	
CivicSphere Node.js, React.js, MongoDB	
- Developed a full-stack civic complaint management platform using React.js, Node.js, and MongoDB with a scalable client-server architecture. - Designed and implemented RESTful APIs for complaint registration, status tracking, user authentication, and data management. - Built a responsive React interface with real-time complaint tracking and efficient state management for an improved user experience. - Integrated AI-assisted threat detection and optimized MongoDB data models to enhance complaint processing and system performance.	
AI Thumbnail Maker React.js, Node.js	
- Built a full-stack AI-powered thumbnail generation application with a React frontend and Node.js backend. - Developed RESTful APIs to process user requests and integrate AI-based image generation services. - Designed a responsive user interface with live preview, customizable templates, and real-time editing capabilities. - Implemented efficient client-server communication, input validation, and error handling to ensure a reliable experience.	

Certifications & Achievements

- LeetCode: Solved 200+ problems across Arrays, Trees, Graphs, DP, and Sliding Window techniques. - Deloitte AU Data Analytics Simulation – The Forage (2025) - Adobe India Hackathon – Round 2 - AWS Academy Cloud Foundations
